

Antigravity Treasury: Technical Roadmap 2026

Project: Fiduciary Rail for Agentic Payments

Timeline: Q1 – Q3 2026

Target Grant: Circle Developer Jumpstart (\$20,000 USDC)

Phase 1: The Fiduciary Launch (Months 1-2)

Focus: Security, Stability, and Developer Trust

Key Deliverables:

- **Mainnet Hardening:** Migration from Base Sepolia to **Base Mainnet**.
- **Fiduciary Guardrails:** Implementation of immutable TypeScript-based spending caps and "Safety Gaps."
- **The Mission Dashboard:** Native Antigravity Sidebar for real-time budget oversight.
- **Circle SDK Integration:** Full production-grade KMS (Key Management Service) implementation.

Success Metric:

- 250 verified developers onboarding and managing a cumulative \$50,000 in agentic "Mission Budgets."
-

Phase 2: Inter-Agent (A2A) Economy (Months 3-5)

Focus: Multi-Agent Orchestration and Autonomous Commerce

Key Deliverables:

- **Allowance-Based Sub-Wallets:** Ability for a Lead Agent to delegate micro-allowances to sub-agents for specialized tasks (e.g., SVG generation, API scanning).
- **Agentic Receipt Standard:** A cryptographic schema for verifiable inter-agent invoices.
- **x402 Deep Integration:** Automated "Pay-as-you-go" handshake for high-frequency API consumption.

Success Metric:

- First documented "Circular Agentic Economy" where an agent autonomously hires and pays another agent within the IDE.
-

Phase 3: The Universal Economic OS (Months 6+)

Focus: Ecosystem Dominance and Cross-IDE Portability

Key Deliverables:

- **MCP Standalone Server:** Decoupling the treasury from Antigravity to support **Cursor**, **Windsurf**, and **VS Code**.

- **Dynamic Risk Scoring:** Local AI-driven model that predicts if an agent's planned spend is "Reasonable" for the task.
 - **Enterprise Audit Portal:** Exportable tax-ready artifacts and CSV financial logs for corporate accounting.
-

Technical Security Overview

- **Identity:** Circle Programmable Wallets (Developer-Controlled).
- **Network:** Base L2 (Optimized for micro-transaction gas efficiency).
- **Protocol:** x402 (Standardized Payment-Required handshakes).
